

delivering solutions

**Imagine.** You are a diversified energy company ranked 275 on the Fortune 500 list. You are committed to identifying and seizing opportunities in energy services and related fields, while maintaining the highest level of gas and electric service to your traditional residential and business customers. You have nearly 5,000 source documents with thousands of structures and facilities that need to be seamlessly woven into a resource that results in answers. Answers that are vital to maintaining your leadership position in the volatile utility marketplace.

## So what do you do?

You turn to ASI for data conversion. They determine and utilize the most up-to-date source documents, combine the multiple source information and resolve all conflicts and inconsistencies. The delivered facility data provides you with valid electrical data consistent with all business rules, and is the engine behind your Outage Management System (OMS). Additionally, ASI performs a data source inventory, scrubbing the distribution and distribution supply sources and translation. Plus, ASI supports a variety of quality assurance and data validation procedures to ensure that the quality of the data meets or exceeds acceptance criteria.

## Success

When it all comes together, the result is a powerful resource to support OMS. And, as a move-forward strategy, ASI provides onsite maintenance by posting the frozen backlog, keeping the data current to within one month. To help meet the aggressive completion schedule, ASI also assists you onsite by providing production staff to augment your project team.
