## CITY OF RIVERSIDE

**Imagine.** You head up a West Coast municipal geospatial team. It is a multi-department collaboration of individuals creating and maintaining spatial information to aid in the creation of maps and analysis to support city departments and their customers.

### So what do you do?

You partner with ASI. You put their resources to work for you to develop a pilot and convert your electric facilities data. ASI ties together multiple sources of data, and the result is a single point for your information, built on a solid data model that gives you the answers you need when you need them. Your database has evolved into a tool that has grown beyond the initial goals, and is on-line as a resource for your constituents.

### Success

As the result of your partnership with ASI, you are able to respond better to public inquiries. You virtually eliminate staff travel time between departments. Your records are up-to-date and your maintenance program is keeping you there. Now, you have an analysis tool that gives you better information, and ultimately better service for the city.
